Role-Based Workspaces

Compare the three demonstration sign-in choices and their quality, production, and reporting dashboards, with access-validation limits clearly explained.

Version 1 | Narration and screenshots | 2 minutes

Introduction - 00:00

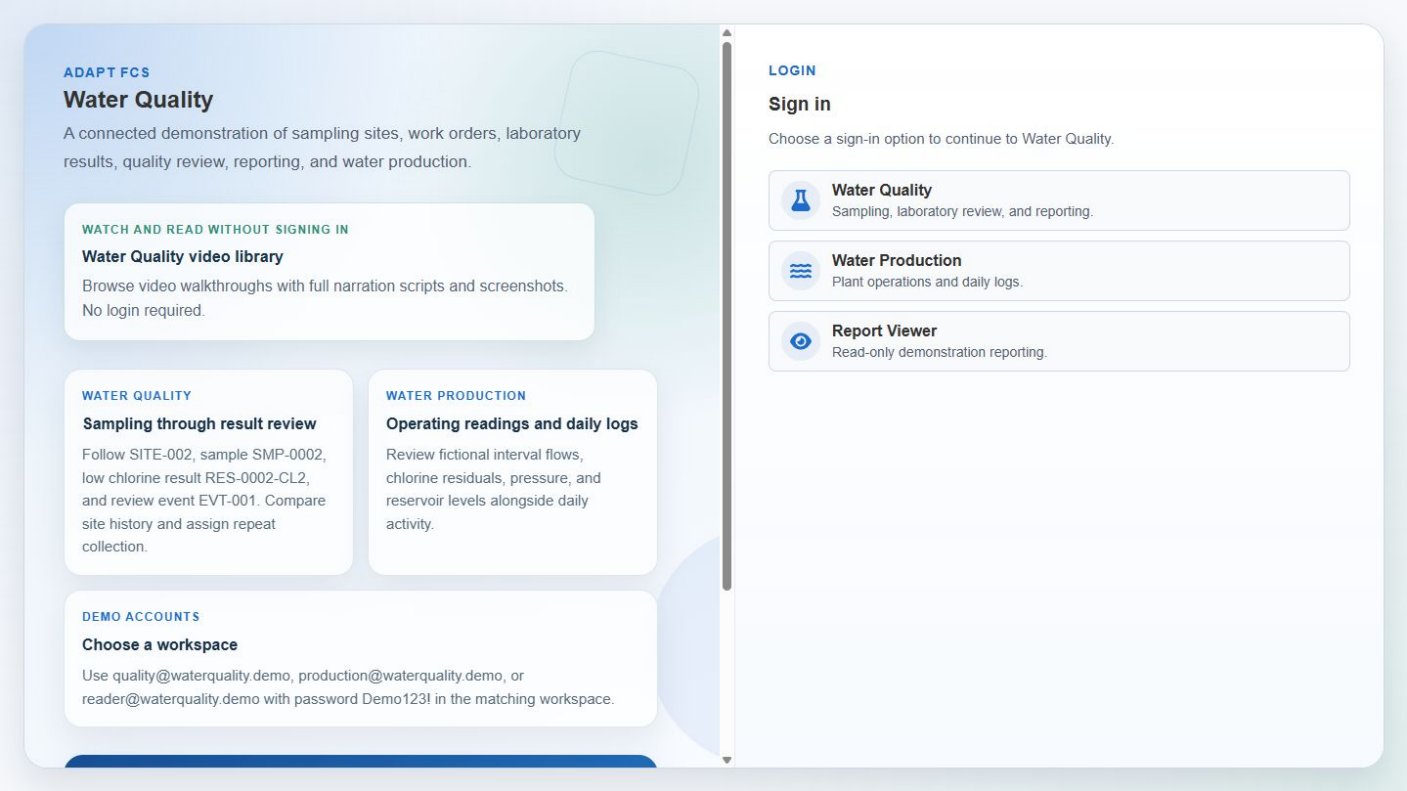

A useful system gives different people a relevant place to start. This walkthrough compares the Water Quality, Water Production, and Reporting workspaces, explains why the login options are customizable examples, and distinguishes dashboard presentation from permissions that still require deployment verification.

This PDF contains the complete narration and relevant screenshots. The linked page includes the video, chapter controls, captions and downloads.

Fictional demonstration data and illustrative targets. This walkthrough does not determine regulatory compliance.

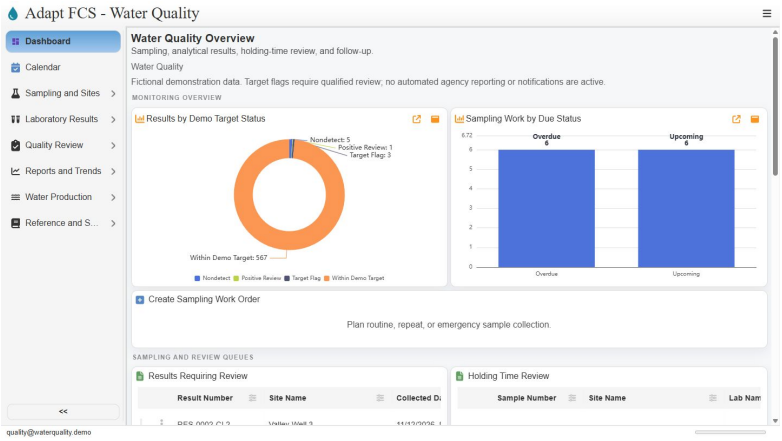

00:22 | Choose a workspace

The Water Quality login page offers three demonstration choices. These showcase how the entry experience can be customized for different audiences. In this example, all three use local demo accounts. They are not a demonstration of three separate identity providers, and choosing a button alone does not grant authorization.

Configurable demonstration sign-in choices

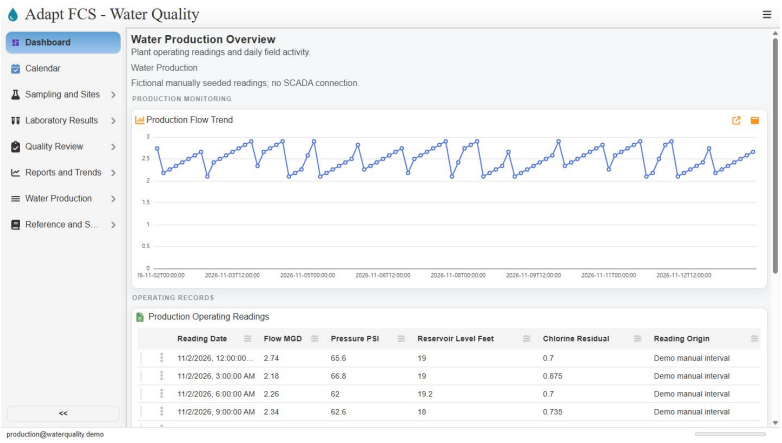

00:44 | Start with water quality

Quality workspace: monitoring, sampling, and follow-up

The quality account opens the Water Quality Overview. Its dashboard brings target-status monitoring, sampling workload, review queues, and reporting information together. This gives sampling and laboratory staff a practical starting point for the day. The navigation remains recognizable across the workspaces, so staff can move into the relevant registers.

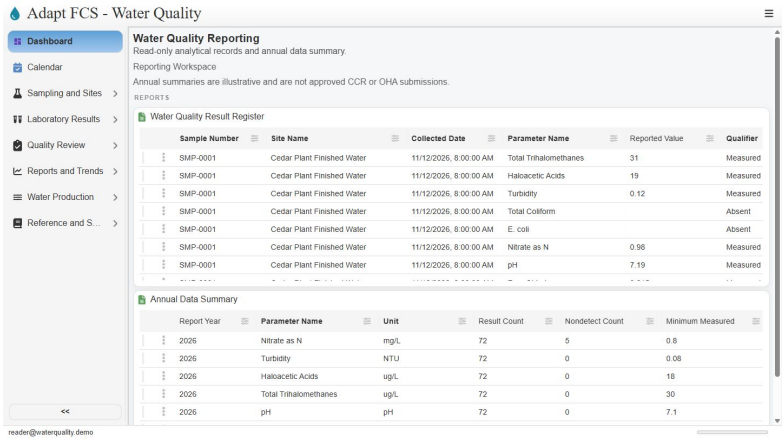

01:08 | Switch to production context

Production workspace: flow trend and operating records

The production account instead opens Water Production Overview. Here, the leading chart shows the seeded flow history, with operating readings below. This is a different default working view over the same demonstration tenant. The readings are fictional manual records; this screen does not establish a live connection to plant equipment.

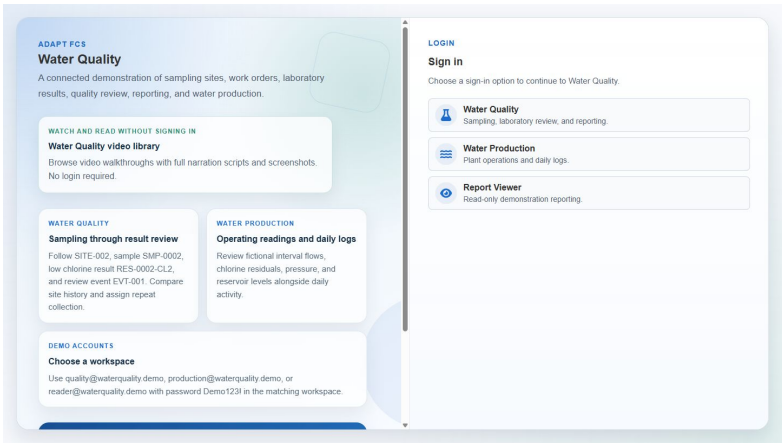

01:30 | Provide a reporting starting point

Reporting workspace: results and illustrative annual summaries

The reporting account starts with the result register and annual data summary. This illustrates a reporting-focused landing page for people who mainly need information. Although the demo labels this workspace read-only, record-detail editing controls remain visible. We have not tested saving under this account, so this walkthrough does not certify effective read-only enforcement.

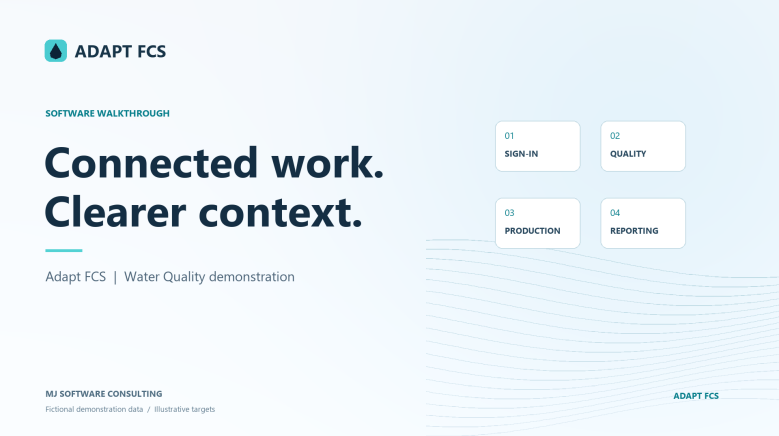

01:55 | Design access around real responsibilities

Separate sign-in choices or one sign-in with assigned profiles

For an actual deployment, internal staff and outside contractors can be organized around their assigned responsibilities. The design can use separate sign-in choices, or a single choice with different assigned profiles. Identity-provider setup, permissions, and isolation must then be configured and verified. These screens demonstrate customizable entry and working views, with fictional individual demo accounts.

02:22 | Closing

Closing card.

Instrumental closing; no narration.
